

# The Sun

From Polar to Solar energy,  
I still think Sun's the best,  
Because from its source it keeps coming,  
Unlike all the rest,  
While we're sucking up it's power,  
We'll be growing yet another flower,  
To help our worlds ecological state,  
And open one more little gate,  
Towards a happy ecological world,  
By the time its gone,  
Along with its source,  
There'll be no time for remorse,  
We'll all be DEAD!  
The Sun is one of our best mates,  
I think we should make it head of all  
states!!
