

# The right formula

Taking driving into the classroom

## Vehicle Dynamics – Theme 6: Crashes

### Activity 6c

### Too much technology?

The majority of road crashes happen as a result of human error. Nowadays, technology provides an increased number of vehicle safety devices aiming to compensate for driver errors. We already have the technology to help drivers control their speed – a major factor in crashes. This has created heated debate on the issue with some experts in favour, others against it.

- Study **Factsheet 6c: Speed and technology** and do your own research into the topic to decide if you would support a wide application of 'speed limiting' or 'speed controlling' measures.
- Write an essay of 1,000 words to expand on the argument.
